TEA (NF633)

Season: Mid-Late season
Main characteristic/s: Mid-Late season excellent flavour
Breeder: New Fruits, Italy

Characteristics of Tea (NF633)
- Harvest date 4 days later than Elsanta
- Excellent flavour with juicy texture
- Large berry size
- High % of Class I berries
- Resistant to Verticillium wilt and crown rot

Cropping Season
The picking season is longer than for Elsanta with less pronounced peaks.

Fruit Quality
The berries are bright red in colour and of regular conical shape, firm with an excellent sweet flavour. The fruit is glossy and attractive. Shelf life is similar to that of Elsanta and the fruit maintain their gloss and shine during storage.

Fruit Yield
High productivity. Tea produces a higher % Class I fruit compared to Elsanta. The average size of the fruit (ca. 28g) is larger than Elsanta.

Plant & Disease Characteristics
Plants of Tea are slightly more vigorous than Elsanta with an erect habit. The fruit is well displayed and can be harvested rapidly.

Plant Characteristics
Plants of Tea are slightly more vigorous than Elsanta with an erect habit. The fruit is well displayed and can be harvested rapidly.

Disease Resistance
Tea is resistant to Verticillium wilt (Verticillium dahliae) and crown rot (Phytophthora cactorum). It is susceptible to Colletotrichum, but a standard spray programme is sufficient to control this disease. Tea is proving to be a robust variety performing well on a wide range of areas.

Use of the Variety
Tea is a versatile variety with a flavour and texture well appreciated by consumers. It performs well both in open-field and greenhouse-cultivation and it is suitable for fresh market sales and PYO, as well as for organic production. The large berry size and the high % Class I help to reduce the picking costs and are appreciated by PYO farms.

Plant Supply
Tea (as: NF633) is protected under Community (EU) Plant Variety Rights Grant No. EU 48960. The propagation and sale of plants, or parts of plants of the variety without a licence is prohibited.
